

TRADING COMPANY
ARSHAN SANG
BUILDING STONE

arshansang.com

Arshan Sang Group is trying to compete with other international groups by producing quality building stones. Building stones are used in buildings and have many uses in different parts inside and outside the building. Therefore, the best type of material that our collection can provide to customers should be used.

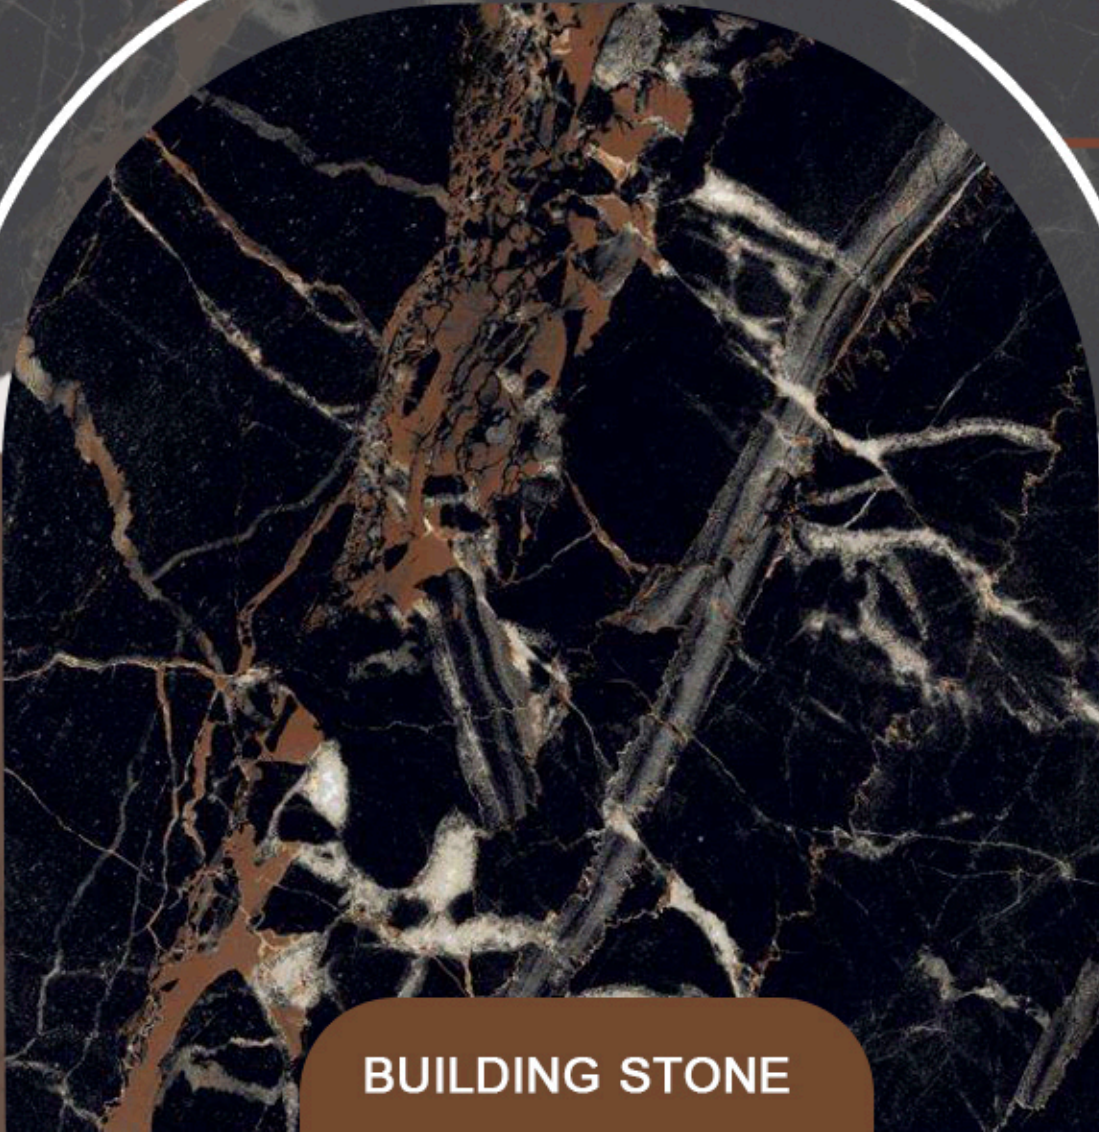

The stone of the exterior of the building
The stone facade of the building and the back view
Wall stone in the yard and border walls
Paving stones in the yard and open spaces such as
balconies, roofs, sidewalks
The stepping stone of the outer space

bands and...

The stone of the interior of the building

Stone walls include stone for parking lot walls, staircase walls, interior walls, etc.

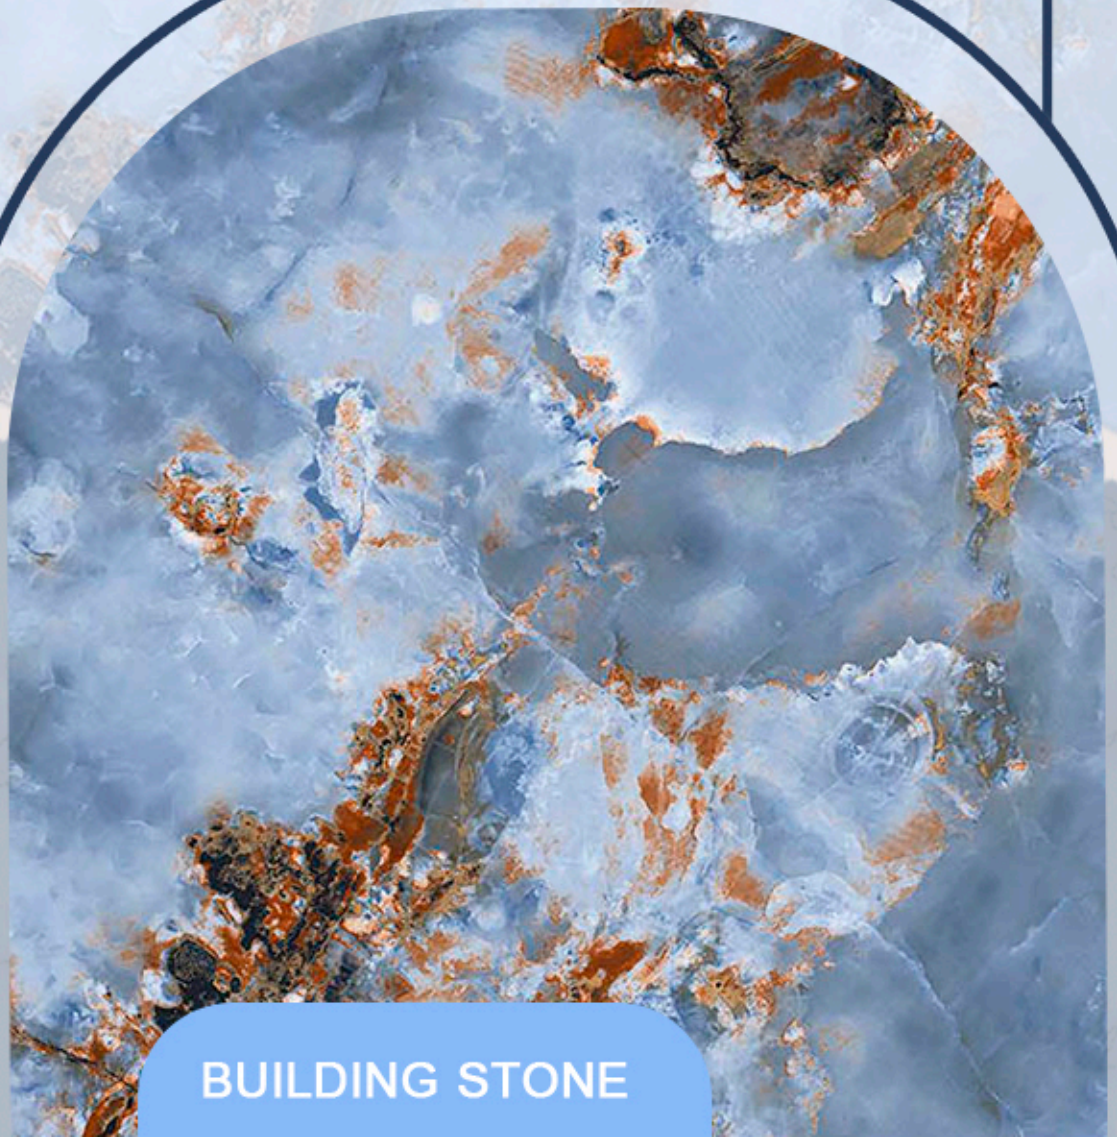

Bridge stone includes stairs, staircases, as well as stairs inside the house or duplex and triplex buildings

Corner stone of the wall

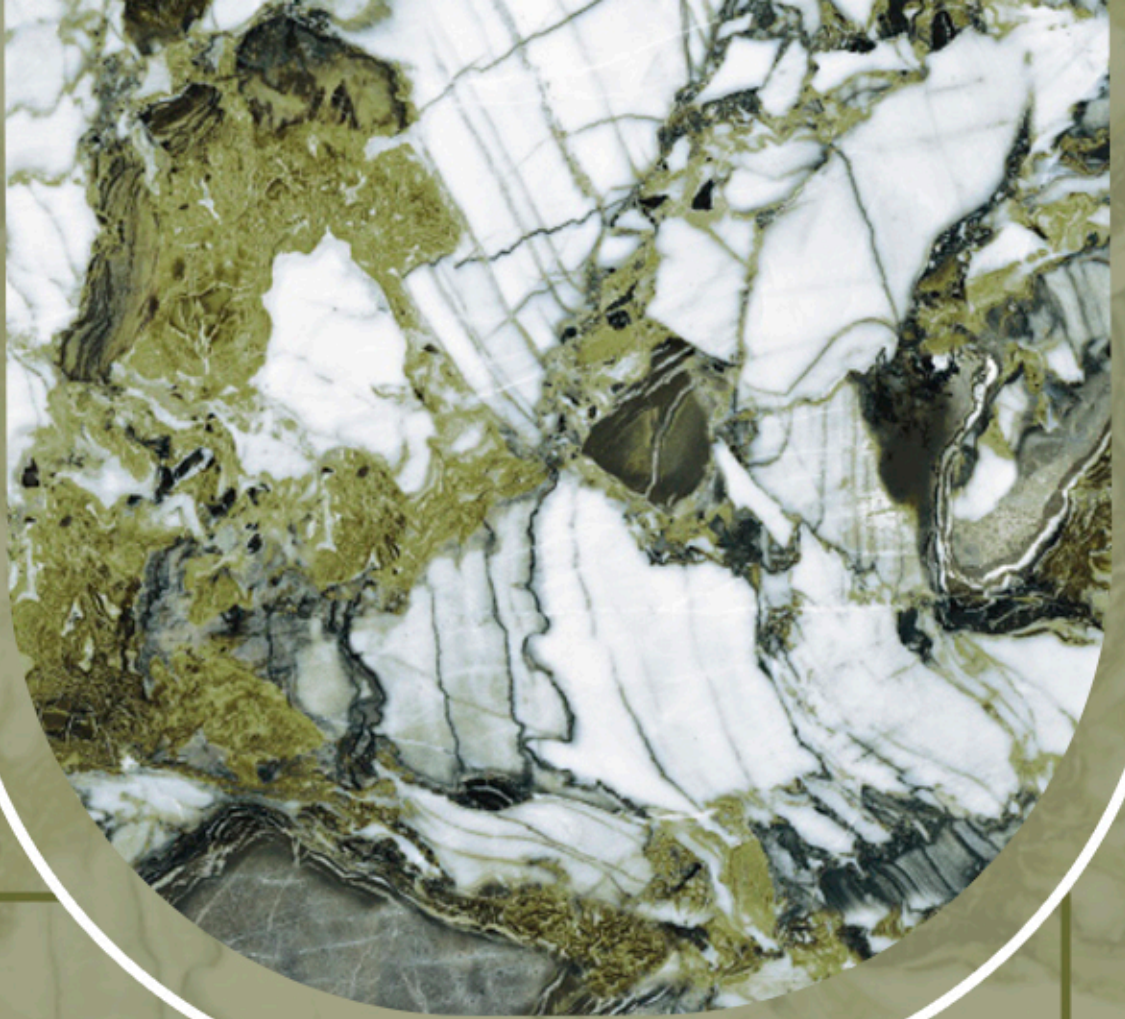

BUILDING STONE

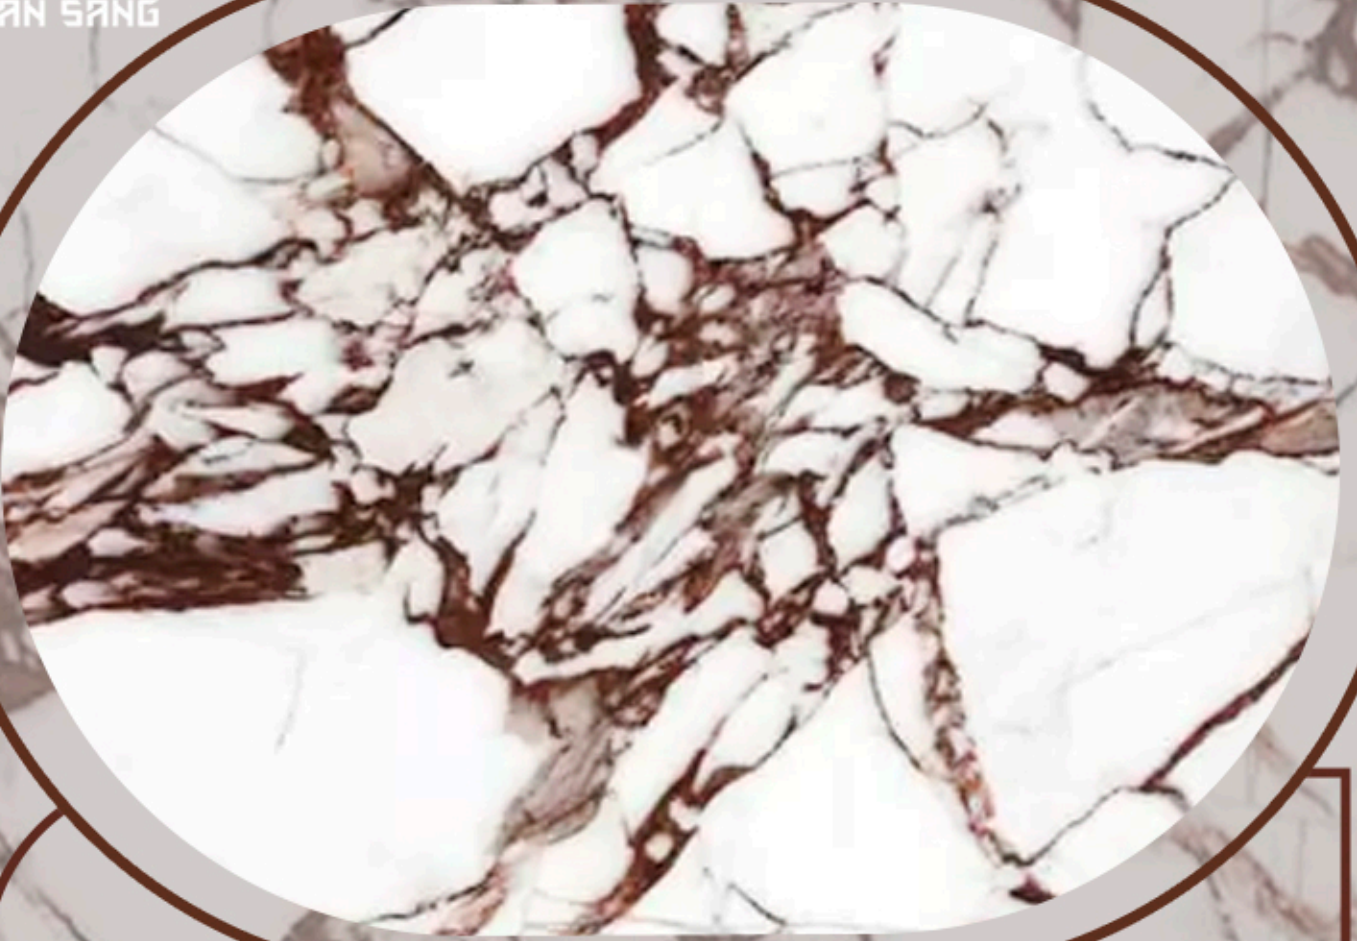

Proper use of stone is important according to its use. In case of improper use of stone, generally over time we will see erosion, breakage and crushing or the loss of the beauty of the stone.

BUILDING STONE

Application of travertine stone
Front and back view of the building
The internal and external walls of the building
Flooring of the exterior of the building
Create a widget

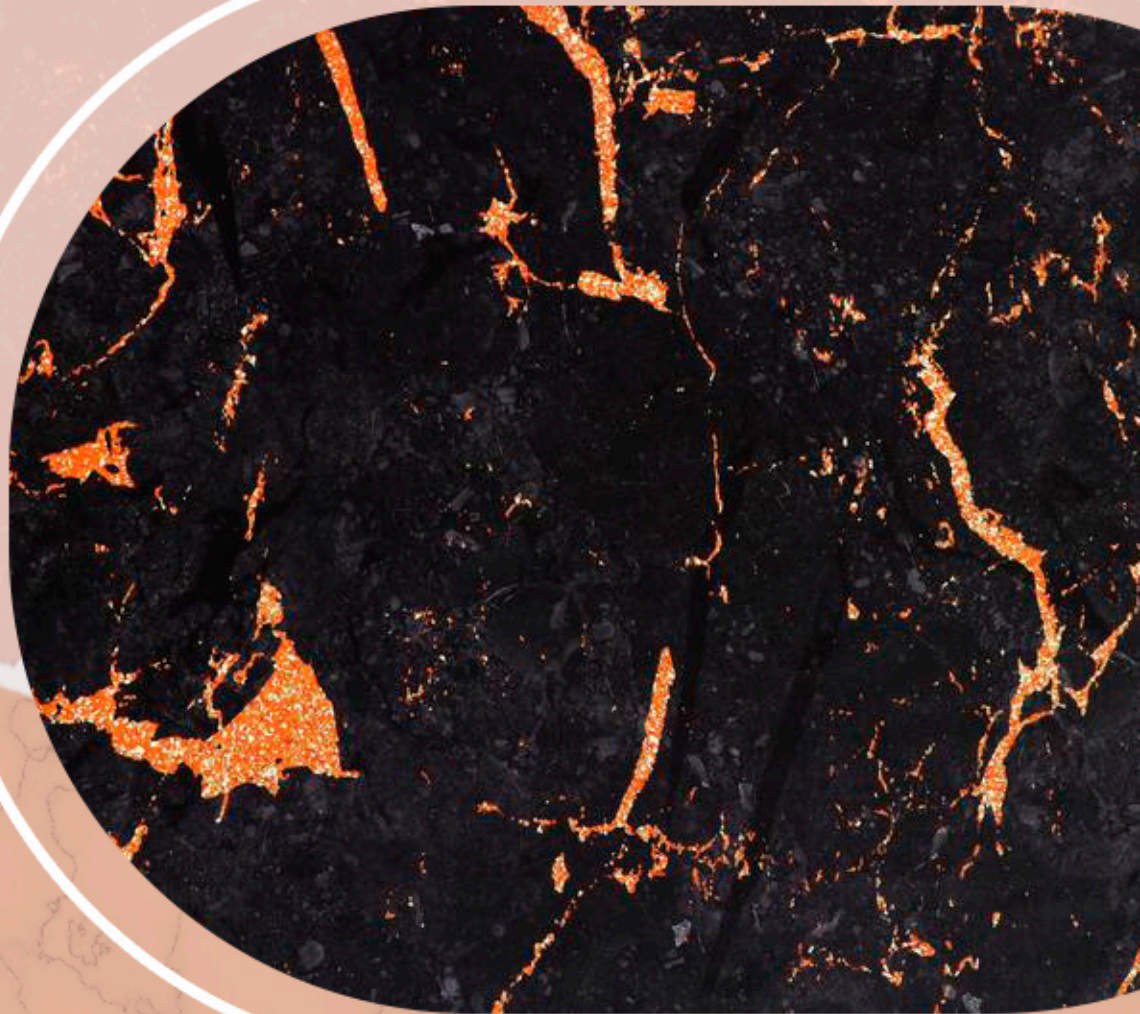

The use of marble in the building

Interior walls in the lobby, hotels, building entrances, corridors in luxury complexes in the form of slabs

Living room wall

Tombs of imams and large religious places longitudinally on the wall and floor

The effect of type and sort on the price of stone
Each of the categories of travertine, granite, marble and marble have the highest prices in their high and premium varieties. But in general, marble stones can be considered among the most expensive building stones.

The effect of color on the price of stone

The color of the stone is one of the factors influencing the selling price of the stone. In some parts of the building, dark colors have more uses, and therefore some stones in darker colors that tend to black have a higher price. But on the other hand, in some parts of the building, such as the facade, light stones have more fans, so the price of the stone facade of the building in bright colors is higher.

Arshan Sang, with a different and more detailed look at the stone industry in the field of construction and related products, we are trying to develop awareness and improve the quality level of products, introducing and marketing new products at the national and international level.
